

Project Design Phase-II: Solution Requirements (Functional & Non-functional)

Field	Detail
<b>Date</b>	<b>02 November 2025</b>
<b>Team ID</b>	<b>NM2025TMID00414</b>
<b>Project Name</b>	<b>Optimizing User Group and Role Management with Assess, Control, and Workflow</b>
<b>Maximum Marks</b>	<b>4 Marks</b>

## Functional Requirements

Following are the functional requirements (FRs) of the proposed solution, aligning with the **Assess, Control, and Workflow** pillars.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
<b>FR-1</b>	<b>Role Definition &amp; Mapping (Control)</b>	<b>FR-1.1:</b> System shall allow Security Admins to create and modify business roles (e.g., 'Finance Analyst').
		<b>FR-1.2:</b> System shall map business roles to a collection of granular technical permissions across target systems.
<b>FR-2</b>	<b>Access Request Workflow (Workflow)</b>	<b>FR-2.1:</b> Users shall be able to submit self-service requests for new roles via a dedicated portal.
		<b>FR-2.2:</b> System shall route requests to the user's Manager and the Role Owner for multi-stage approval.
<b>FR-3</b>	<b>Automated Provisioning/Deprovisioning (Workflow)</b>	<b>FR-3.1:</b> Upon final approval, system shall automatically provision/deprovision the role in the target application via connectors.
		<b>FR-3.2:</b> System must automatically revoke all roles upon notification of user departure (offboarding).
<b>FR-4</b>	<b>Periodic Access Recertification (Assess)</b>	<b>FR-4.1:</b> System shall schedule and initiate quarterly campaigns for all Role Owners to review and either approve or revoke current role assignments.
		<b>FR-4.2:</b> System shall automatically revoke any role not explicitly re-approved within

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
		the defined campaign deadline.
<b>FR-5</b>	<b>Segregation of Duties (SoD) Check (Control)</b>	<b>FR-5.1:</b> System must detect conflicting role combinations (e.g., 'Payment Processor' and 'Payment Approver') during the request workflow.
		<b>FR-5.2:</b> If an SoD violation is detected, the request must be escalated for mandatory exception approval.

## Non-functional Requirements

Following are the non-functional requirements (NFRs) essential for the reliability and effectiveness of the proposed solution.

NFR No.	Non-Functional Requirement	Description
<b>NFR-1</b>	<b>Usability</b>	The self-service portal and recertification dashboard must be <b>intuitive and simple</b> enough for all users (technical and non-technical) to navigate with minimal training.
<b>NFR-2</b>	<b>Security</b>	The platform must support <b>MFA</b> for administrative access and use <b>encrypted communication</b> (TLS) for all provisioning connectors.
<b>NFR-3</b>	<b>Auditability</b>	All workflow approvals, access changes, recertification decisions, and SoD checks must be recorded in an <b>immutable, searchable log</b> with full timestamp and user ID.
<b>NFR-4</b>	<b>Performance</b>	The average time-to-provision for an approved role request must not exceed <b>5 minutes</b> for the most common target applications.
<b>NFR-5</b>	<b>Availability</b>	The core Role Management and Workflow services must maintain a minimum uptime of <b>99.9%</b> during business hours.
<b>NFR-6</b>	<b>Scalability</b>	The system must be able to manage access for <b>over 100,000 users</b> and process <b>5,000 role-related</b>

NFR No.	Non-Functional Requirement	Description
		<b>transactions</b> per day without significant degradation of performance.
